HbbTV finally has its open-source solution, on voxtok.org

Montpellier, France – April 11th 2016 – Voxtok, the best Music Experience provider for Audio and TV industries and the first company to release a HbbTV multi-room music service for TV, is proud to launch **voxtok.org**, a private Community Portal dedicated to its open-source software and releases its first private project: HbbTV SDK.

Voxtok HbbTV SDK is the first up-to-date royalty-free HbbTV open-source implementation. It can be deployed without any restrictions, supporting HbbTV 1.5 and 2.0 specifications.

This first release is dedicated to Blink and comes as a library that enhances the Web Browser with HbbTV features. It will also be available for Android TV (details available for voxtok.org members).

A free PC demonstrator of our HbbTV SDK is available for download. Give it a try!

Voxtok is an official HbbTV consortium member and its team has acquired a strong experience in developing and massively deploying HbbTV systems, being the first team to demo it publicly in 2009.

Becoming a **voxtok.org** Community Member, at a reasonable yearly subscription, gives access to sources, tools, updates and evolutions of the HbbTV SDK and further upcoming projects. Voxtok teams will support you from its European (France) and Asian (Taiwan) locations.

Voxtok.org opens a new way of making software as well as sharing assets and resources.
